Origins Of The Snake Game

Like so many of the [retro games](#) that we have come to know and love here at Coolmath Games, [Snake](#) started in the arcade. You know, those places that had tons of coin-operated

Interestingly enough, though, the first version of Snake wasn't actually called Snake. It was a very similar game called Blockade. Blockade was created by the gaming manufacturer Gremlin, a San Diego-based gaming company. They published the game in 1976, right around when another famous game, [Atari Breakout](#), first came out.

The Calculator Era

Blockade was just the first of the Snake-game genre. Later, many other games started getting released with a similar structure. As these Snake games began to grow in popularity, it made its way into an unexpected platform – graphing calculators. With its simple design and 8-bit style of gameplay, it was perfect for the simple Texas Instruments graphing calculators.

Mobile Manifest

1997 is when one of the most iconic historical moments of Snake occurred. Snake was programmed into the Nokia 6110 phone, the indestructible brick that was able to make calls. At one point in history, Snake was embedded into 350 million individual Nokia phones. It likely goes without saying that this was huge for Snake. Millions of people across the world were playing Snake and trying to one-up their friends with a new high score.

Current Day

In the past couple of years, Snake has actually had quite an interesting journey. In 2021, there was an explosion of Snake game videos on the social media platform Tik Tok. In their feature Tik Tok live, content creators managed to garner millions of views by showing off their Snake gaming skills. This brought in a whole new generation of gamers who became interested in Snake. While the trend of playing Snake on Tik Tok live has eventually died out over time, many people are still loyal fans to the game and Snake remains extremely popular among gamers.
